PROFESSIONAL SUMMARY

Informatics Engineering graduate from Universitas Komputer Indonesia with a GPA of 3.80/4.00, focusing on Data Science and Web Development. Certified Associate Data Scientist (BNSP) with research internship experience at BRIN in signal processing, spectral feature extraction, and developing web-based analytical dashboards. Proficient in Python, SQL, and modern web technologies, with proven experience in machine learning, computer vision, and Next.js full-stack development.

INTERNSHIP EXPERIENCE

Data Science Intern **October 2025 - December 2025**

Badan Riset dan Inovasi Nasional (BRIN) | Bandung, West Java, Indonesia

- Developed an interactive analytics dashboard using Streamlit to automate the classification of earthquake infrasound signals and accelerometer data across three BRIN monitoring stations.
- Implemented Isolation Forest for anomaly detection, Fast Fourier Transform (FFT) for spectral feature extraction, and K-Means Clustering with the Elbow Method to identify optimal cluster counts.
- Engineered an external CSV data processing module employing the Model-View-Controller (MVC) architectural pattern.
- Deployed the application to a private repository on Hugging Face Spaces to ensure internal data privacy and streamline functionality validation.

Education

Universitas Komputer Indonesia (UNIKOM) **October 2022 - October 2026**

Bachelor of Informatics Engineering | GPA: 3.80/4.00

Technical Skills

- **Programming Languages:** Python, JavaScript, TypeScript, PHP, SQL, Java
- **Web Development:** HTML, CSS, React.js, Next.js, Vite, Tailwind CSS, FastAPI
- **Data Science & Machine Learning:** Computer Vision, Natural Language Processing (NLP), Data Analysis & Visualization, Machine Learning
- **Algorithms & Modelling:** YOLOv11-seg, Isolation Forest, K-Means Clustering, Multinomial Naive Bayes, Fast Fourier Transform (FFT)
- **Libraries & Frameworks:** Pandas, NumPy, Scikit-learn, OpenCV, Matplotlib, Streamlit
- **Database & Tools:** MySQL, Git, GitHub, Visual Studio Code, Google Colab, Tableau, Hugging Face, Vercel

CERTIFICATIONS & TRAINING

- **Fundamental Algoritma |** Coding Studio **October 2026**
- **Gemini Certified Student - University |** Google for Education **August 2026 - August 2029**
- **Certified Associate Data Scientist (CADS) |** BNSP Certification **March 2026 - March 2029**
- **TOEFL |** Language Center, Universitas Komputer Indonesia (Score: 500) **November 2025 - November 2027**
- **Code Generations and Optimization |** Hacktiv8 Indonesia **October 2025**
- **Code Generation and Optimization Using IBM Granite |** IBM **September 2025**
- **CCNA: Introduction to Networks |** Cisco **February 2024**

FEATURED PROJECTS

Pothole Severity Classification | Python, YOLOv11-seg, Streamlit

Research Thesis

- Built a road pothole severity classification system categorizing damage into Low, Medium, and Severe based on 3D volume estimation from RGB images and depth maps using the PothRGBD dataset.
- Implemented YOLOv11-seg for pothole instance segmentation, integrating mask boundaries with depth data to estimate surface area, depth, and total void volume.
- Evaluated model performance on test data, achieving 94.34% Mask Precision, 87.72% Mask Recall, and 86.70% Mask mAP@0.5.

Mini-Blog-IBM | Next.js, TypeScript, Tailwind CSS, IBM Granite

Live Demo | Github Repository

- *Developed an AI-powered web application that automatically generates structured blog articles based on user prompts using IBM Granite via Replicate API and Next.js API Routes.*
- Engineered dynamic Markdown rendering for article outputs, client-side history persistence using LocalStorage, and continuous deployment through Vercel.

Boarding House Rental Inquiry Chatbot | Python, TF-IDF, Multinomial Naive Bayes

- *Developed a machine learning inquiry classification chatbot that categorizes prospective tenant questions into four categories: Location, Room Type, Price, and Facilities, utilizing a dataset of 1,251 question-and-answer pairs.*
- Applied Indonesian natural language preprocessing, TF-IDF vectorization, and Multinomial Naive Bayes classification, achieving an evaluation accuracy of 88.46%.
