PROFESSIONAL SUMMARY

Informatics Engineering graduate from Universitas Komputer Indonesia with an interest in Data Science and Web Development. Knowledgeable in programming, data analysis, machine learning, web application development, and database management. Holds a BNSP Associate Data Scientist certification and is motivated to develop technical skills and contribute to the development of technology solutions.

INTERNSHIP EXPERIENCE

Data Science Intern
Badan Riset dan Inovasi Nasional (BRIN) | Bandung
October 2025 - December 2025

- Developed a Streamlit-based analytics dashboard to automate the classification of earthquake infrasound signals and accelerometer data from three BRIN monitoring stations.
- Applied Isolation Forest for anomaly detection, as well as Fast Fourier Transform (FFT) for spectral feature extraction and K-Means Clustering with the Elbow Method to determine the optimal number of clusters.
- Developed an external CSV file-processing module using the Model-View-Controller (MVC) architecture.
- Deployed the application to Hugging Face Spaces with a private repository to support internal data security and functional validation.

EDUCATION

Universitas Komputer Indonesia (UNIKOM)
Bachelor of Informatics Engineering | 2022 - 2026
GPA: 3.80 / 4.00

SKILLS

Hard Skills

- Pemrograman: Python, Java, JavaScript, TypeScript, PHP
- Web Development: HTML, CSS, React, Next.js, Vite, Tailwind CSS
- Backend Development: FastAPI
- Data Science & Machine Learning: Data Analysis, Data Visualization, Machine Learning, Computer Vision, Natural Language Processing (NLP)
- Algorithms & Signal Processing: YOLOv11-seg, Isolation Forest, K-Means Clustering, Multinomial Naive Bayes, Fast Fourier Transform (FFT)
- Image Processing: OpenCV
- Database: SQL, MySQL, Database Management
- Tools & Libraries: Google Colab, Visual Studio Code, Git, GitHub, Tableau, Pandas, NumPy, Scikit-learn, Matplotlib

Soft Skills

- Problem Solving
- Analytical Thinking
- Communication
- Teamwork

CERTIFICATIONS & TRAINING

- **Fundamental Algoritma - Coding Studio** | October 2026
- **Gemini Certified Student - University - Google for Education** | Agustus 2026
- **Certified Associate Data Scientist (CADS) - Sertifikasi BNSP** | March 2026 - March 2029
- **TOEFL - Language Center, Universitas Komputer Indonesia | Score: 500 | November 2025 – November 2027**
- **Code Generations and Optimization - Hacktiv8 Indonesia** | October 2025
- **Code Generation and Optimization Using IBM Granite - IBM** | September 2025
- **CCNA: Introduction to Networks - Cisco** | February 2024

SELECTED PROJECTS

Pothole Severity Classification | Python, YOLOv11-seg, Streamlit

- Developed a system to classify pothole severity into Low, Medium, and High categories based on estimated 3D volume from RGB images and depth maps in the PothRGBD dataset.
- Implemented YOLOv11-seg to detect and segment potholes, then integrated segmentation results with depth data to estimate pothole area, depth, and volume.
- Evaluated the model on test data with 94.34% Mask Precision, 87.72% Mask Recall, and 86.70% Mask mAP@0.5.

Mini-Blog-IBM | Next.js, TypeScript, Tailwind CSS, IBM Granite

Live Demo | Github Repository

- Developed an AI-powered web application to automatically generate blog posts based on user-provided topics or ideas using IBM Granite through the Replicate API and Next.js API Routes.
- Implemented Markdown-based output, writing history storage using LocalStorage, and application deployment through Vercel.

Boarding House Rental Chatbot | Python, TF-IDF, Multinomial Naive Bayes

- Developed a Machine Learning-based chatbot to classify prospective tenants' questions into four categories: location, room type, price, and facilities, using a dataset of 1,251 question-and-answer patterns.
- Applied Indonesian text preprocessing, TF-IDF, and Multinomial Naive Bayes, achieving a test accuracy of 88.46%.
